Project description

Rental Hub is a modern, user-friendly web application designed to connect property owners and potential tenants in Saudi Arabia. It offers a seamless browsing experience for users looking to rent various types of properties, including apartments, villas, houses, and garages. The platform showcases property listings with detailed information, images, and agent contacts, ensuring a smooth and efficient property search process.

With Saudi Arabia preparing to host major global events like the World Cup, Rental Hub plays a crucial role in accommodating the expected influx of visitors, tourists, and professionals. By providing easy access to a wide range of rental properties, the platform helps ensure that both short-term and long-term housing needs are met efficiently during this exciting time.

Project description

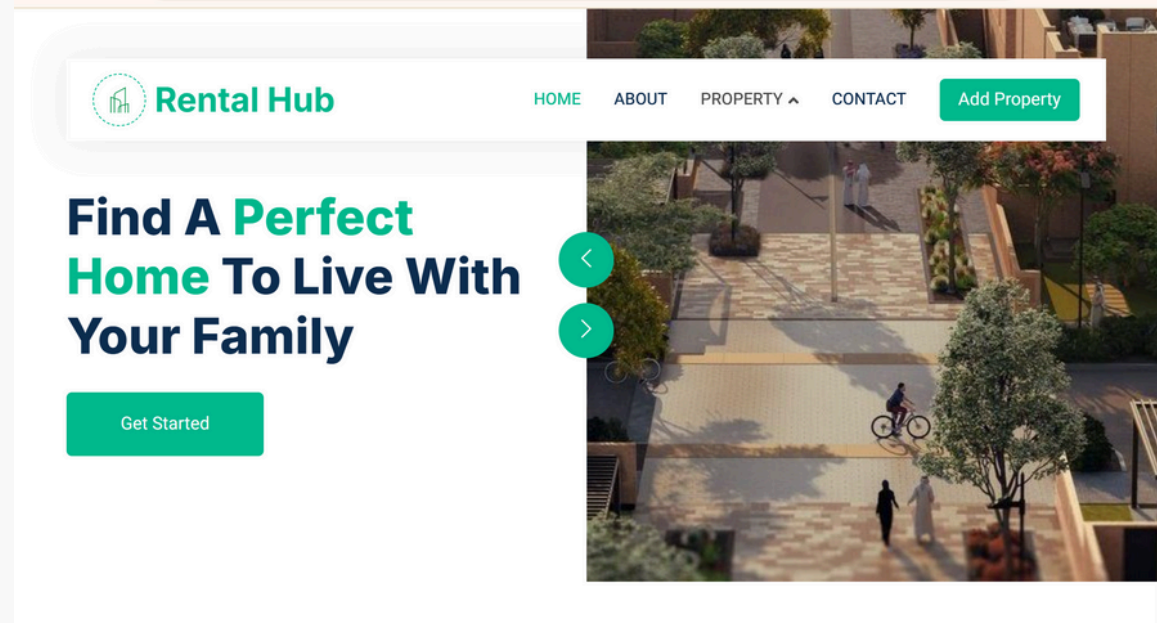

Main Sections:

- **Navigation Bar:** Links to Home, About, Property sections, Contact, and an "Add Property" button.
- **Property Categories:** Displays different property types (Apartment, Villa, Home, Garage) with icons and property counts.
- **About Us:** Brief description of the platform's mission and offerings, highlighting why it's the #1 place to find property.
- **Property Listings:** A selection of featured properties with details like price, location (Jeddah), size, and specifications (beds, baths).
- **Call to Action:** Encourages users to contact certified agents or book an appointment.
- **Agents Section:** Showcases the team of property agents with their images and names.
- **Testimonials:** Displays reviews and feedback from clients in both Arabic and English.
- **Footer:** Contains contact details, quick links, social media buttons, and legal links.

Web Development Course Project - Phase 2

Group Members

Sarah Bahashwan - Deema Alsini - Jana Zakai

25 April, 2025

Phase 2 description

In Phase 2, we enhanced the Rental Hub platform by connecting the front-end forms to a backend server and a MySQL database, creating a fully functional real estate system.

Backend Development

- We created a Node.js server .
- We connected the server to a MySQL database called rental_hub using the mysql2 package.
- Two API endpoints were developed:
 - /insert: Accepts contact form submissions and inserts the data into a contact_info table.
 - /add-property: Accepts property submissions and inserts the data into a properties table.

Phase 2 description

Frontend JavaScript Enhancements

- Contact Form (contact.html)
 - Front-end validation was added using JavaScript (script.js):
 - Checks for empty fields, valid email format, and valid phone number.
 - When the form is submitted, the data is sent via a POST request to the server endpoint /insert.
 - Upon success or failure, appropriate alerts are shown to the user.
- Add Property Form (add-property.html)
 - Similar front-end validation was added in add-prop.js.
 - Checks for required fields, valid formats.
 - The form data is sent via a POST request to /add-property to store the property details in the database.

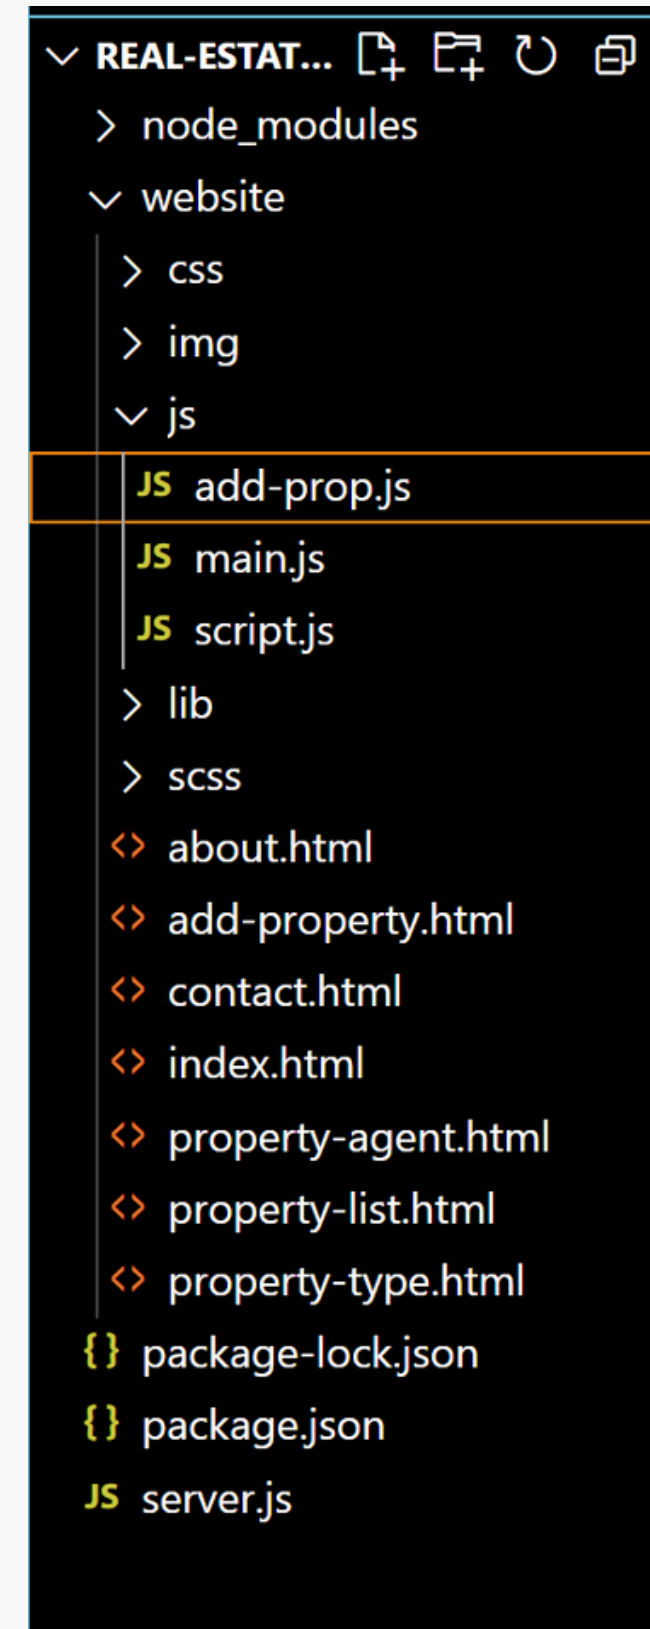

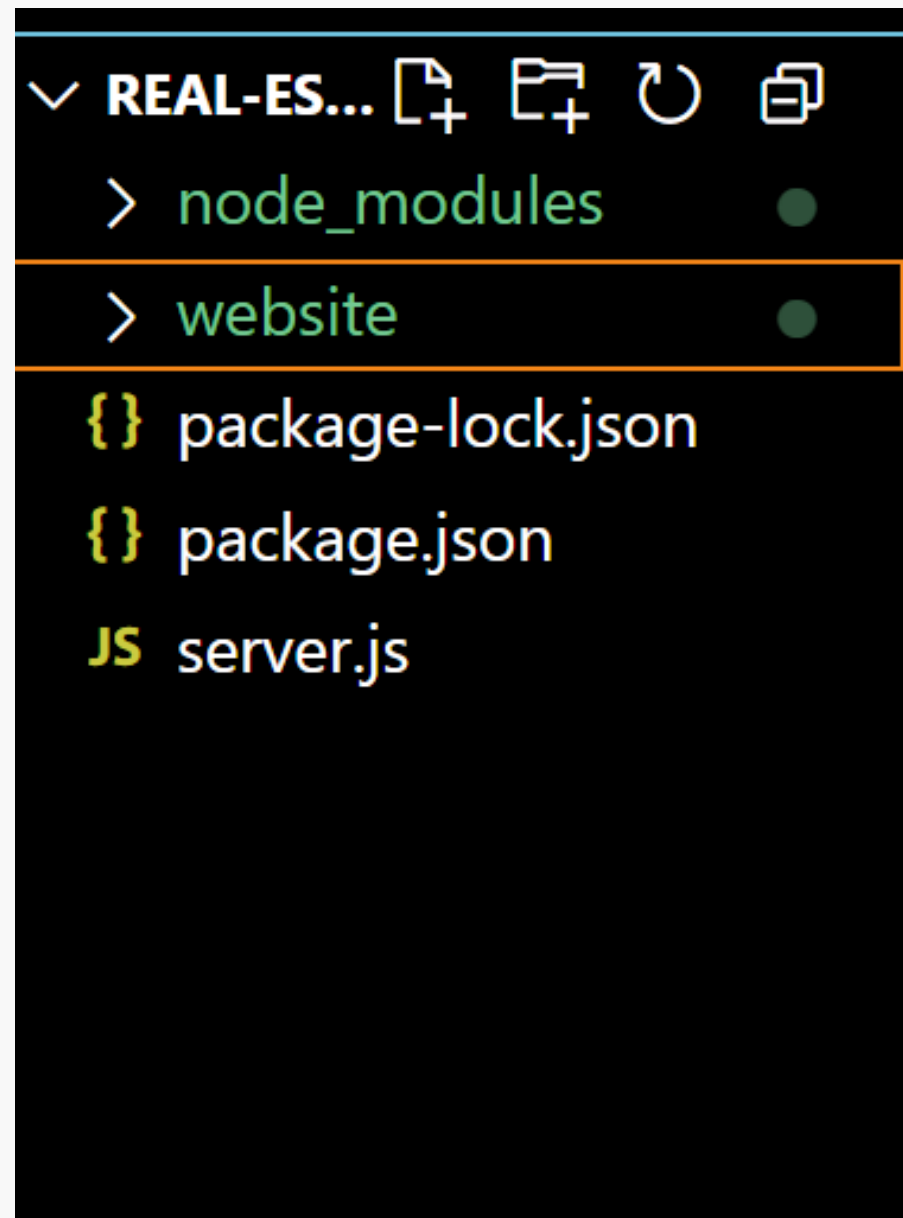

Phase 2 description

Database Structure

- contact_info table:
 - Stores information submitted from the Contact Us form (e.g., first name, last name, email, phone, gender, DOB, language, subject, and message).
- properties table:
 - Stores property listing details submitted by users (e.g., full name, email, phone, title, type, location, price, area, number of rooms, bathrooms, description, and image placeholder).

File structure

Backend JavaScript

file: server.js

```
1  const express = require("express");
2  const app = express();
3  const port = 3000; // or any other desired port //setting up DB
4  const mysql = require("mysql2");
5  const pool = mysql.createPool({
6    connectionLimit: 10,
7    host: "localhost",
8    user: "root",
9    password: "root",
10   database: "rental_hub",
11   port: 8889,
12 });
13 //serving static website
14 app.use("/", express.static("./website"));
15 // Insert data route
16 app.use(express.json());
17
18 app.use(express.urlencoded({ extended: true }));
19 app.post("/insert", (req, res) => { // take the data sent to the front end--> pass it to back end --> save to DB
20   const data = {
21     FName: req.body.Fname,
22     Lname: req.body.Lname,
23     email: req.body.email,
24     phone: req.body.phone,
25     gender: req.body.gender,
26     DOB: req.body.DOB,
27     lan: req.body.lan,
28     subject: req.body.subject,
29     message: req.body.message,
30   };
31
32   const query = "INSERT INTO contact_info SET ?";
33   pool.query(query, data, (error, result) => { if (error) {
34     console.error("✗ Error inserting into database:", error);
35     return res.status(500).send("Database error");
36   }
37   });
38   res.send("Data inserted successfully!");
39 });
40
41
```

```
42 //activating server
43 app.listen(port, () => {
44   console.log(`Server is running on port ${port}`);
45
46   app.post("/add-property", (req, res) => {
47     console.log("✓ Add Property route hit");
48     const propData = {
49       fullName: req.body.fullName,
50       email: req.body.email,
51       phone: req.body.phone,
52       title: req.body.title,
53       type: req.body.type,
54       location: req.body.location,
55       price: req.body.price,
56       area: req.body.area,
57       rooms: req.body.rooms,
58       bathrooms: req.body.bathrooms,
59       description: req.body.description,
60       propertyImage: req.body.propertyImage,
61     };
62
63     const query = "INSERT INTO properties SET ?";
64     pool.query(query, propData, (error, result) => {
65       if (error) {
66         console.error("✗ Error inserting into database:", error);
67         return res.status(500).send("Database error");
68       }
69       res.send("Data inserted successfully!");
70     });
71   });
72
73
```

Front end JavaScript ● ● ● ● ●

1. CONTACT US js code with front end validation

```
1  const contactForm = document.getElementById("contact-us").addEventListener("submit", function (event) {
2      event.preventDefault();
3
4      // Get values
5      let FName = document.getElementById("Fname").value.trim();
6      let Lname = document.getElementById("Lname").value.trim();
7      let email = document.getElementById("email").value.trim();
8      let phone = document.getElementById("phone").value.trim();
9      let gender = document.getElementById("gender").value;
10     let DOB = document.getElementById("DOB").value;
11     let lan = document.getElementById("lan").value;
12     let subject = document.getElementById("subject").value.trim();
13     let message = document.getElementById("message").value.trim();
14
15     // Simple validation
16     if (!Fname || !Lname || !email || !phone || !gender || !DOB || !lan || !subject || !message) {
17         alert("Please fill in all fields.");
18         return;
19     }
20
21     if (!/^S+@\S+\.\S+$/.test(email)) {
22         alert("Please enter a valid email address.");
23         return;
24     }
25
26     if (!/^[0-9]{8,15}$/.test(phone)) {
27         alert("Please enter a valid phone number (numbers only, 8-15 digits).");
28         return;
29     }
30
```

```
31     // If all valid, send to server
32     fetch("/insert", {
33         method: "POST",
34         headers: { "Content-Type": "application/json" },
35         body: JSON.stringify({ FName, Lname, email, phone, gender, DOB, lan, subject, message }),
36     })
37     .then(function (response) {
38         if (response.ok) {
39             alert("Data inserted successfully!");
40
41             // Clear form
42             document.getElementById("contact-us").reset();
43
44         } else {
45             alert("Failed to insert data!");
46         }
47     })
48     .catch(function (error) {

50         alert("An error occurred!");
51     });
52
53 });
54
```

file: website/js/script.js

Front end JavaScript ● ● ● ● ●

2. ADD PROPERTY js code with front end validation

```
1 document.getElementById("propertyForm").addEventListener("submit", function (event) {
2   event.preventDefault();
3
4   // Get values
5
6   const fullName = document.getElementById("fullName").value.trim();
7   const email = document.getElementById("email").value.trim();
8   const phone = document.getElementById("phone").value.trim();
9   const title = document.getElementById("propertyTitle").value.trim();
10  const type = document.getElementById("propertyType").value;
11  const location = document.getElementById("location").value.trim();
12  const price = document.getElementById("price").value.trim();
13  const area = document.getElementById("area").value.trim();
14  const rooms = document.getElementById("rooms").value.trim();
15  const bathrooms = document.getElementById("bathrooms").value.trim();
16  const description = document.getElementById("description").value.trim();
17  const propertyImage = document.getElementById("propertyImage").value.trim();
18
19  // Simple validation
20  if (!fullName || !email || !phone || !title || !type || !location || !price || !area || !rooms || !bathrooms || !description) {
21    alert("Please fill in all fields.");
22    return;
23  }
24
25  if (!/^S+@\S+\.\S+$/.test(email)) {
26    alert("Please enter a valid email address.");
27    return;
28  }
29
30  if (!/^[0-9]{8,15}$/.test(phone)) {
31    alert("Please enter a valid phone number (numbers only, 8-15 digits).");
32    return;
33  }
34
```

```
35 // If all valid, send to server
36 fetch("/add-property", {
37   method: "POST",
38   headers: { "Content-Type": "application/json" },
39   body: JSON.stringify({ fullName, email, phone, title, type, location, price, area, rooms, bathrooms, description, propertyImage })
40 })
41 .then(function (response) {
42   if (response.ok) {
43     alert("Data inserted successfully!");
44
45     // Clear form
46     document.getElementById("propertyForm").reset();
47
48   } else {
49     alert("Failed to insert data!");
50   }
51 })
52 .catch(function (error) {
53   console.error("Error:", error);
54   alert("An error occurred!");
55 })
56 });
57
```
